

~~SECRET~~/NOFORN - HANDLE VIA SKEET CHANNELS ONLY

PROJECT SUN STREAK (U)

WARNING NOTICE: INTELLIGENCE SOURCES AND METHODS INVOLVED

PROJECT NUMBER: 8717 SESSION NUMBER: 3
DATE OF SESSION: 24 DEC 87 DATE OF REPORT: 24 DEC 87
START: 0909 END: 0946
METHODOLOGY: CRV VIEWER IDENTIFIER: 003

1. (S/NF/SK) MISSION: See original tasking data and EEI, attached.
2. (S/NF/SK) VIEWER TASKING: At the beginning of the session, 003 was informed that an operation was at hand and that more information would be forthcoming in Stage 3. (003 inquired if the site was the same as that which was worked Solo, last week; the monitor replied in the negative--an untruth since 003 had in fact worked 8717 twice before, Solo). Later in the session, 003 was directed to explore the target area using a Stage 6 cue of 1990. Also, 003 was finally informed that this site had indeed been worked previously inducing a strong feeling of deja vu on the viewer's part.
3. (S/NF/SK) COMMENTS: Good session. Subsequent work will concentrate upon the physical layout of the target/site.

~~SECRET~~/NOFORN - SKEET CHANNELS ONLY

CLASSIFIED BY: DIA-DT
DECLASSIFY : OADR

Summary

Site involves structures and a large, flat, segmented surface made of interlocking squares. Water seems to be nearby. Climate is not extremely cold, but seems somewhat mild, almost like a Mediterranean setting in the winter time. AOL of Black Sea or Caspian Sea coast. At least one of the structures is very large and tall, with wide spacious areas inside, and borders on the flat area. An object associated with the structure is rounded, very smooth and glossy like painted metal; it is rounded and may be cylindrical and tapering; there is an impression that the object is somehow connected with both the inside and the outside of the structure--as if it spends part of its time inside and part outside, or that it is partly in and partly out. It is also possible that this cylindrical shape is actually part of the structure. There is a sense of technicality about the place--engineering, applied science, concentrated effort, sorgfaeltig Bemuehungen ("painstaking efforts"). The site doesn't seem to be finished right now, like they are still working on it. It's as if the facility is used as much as it can be up to its current level of completion, and as more "comes on line", more use is made of it. The cue of "1990" produced the impression that the site was to all intents and purposes "operational"; many people were going to and fro among the structures bent on their assigned activities. Operations here involve highly technical technology: electronics, power consumption, centralization, people w/headsets, 3-dimensional planes, height, declination, computer constructs of "umbrella" space dimensions--which were light transparent blue with transient red and green lines, both broken and unbroken, rotating, shifting zones. AOL/S impression that it is "like" a system for tracking all kinds of space vehicles, i.e. satellites, orbital junk, etc. AOL of US Space Command.

people busy

many

occupied

operational
completion

new

functioning

Set 1/2 Idea of many people going here & there in immediate area among structures doing ongoing unique tasks. Idea that present time "facility" not complete but will be eventually fully functioning as present intent & plans dictate.

Set 1/2 It's "like" at some new facility & side, where not dribbles are carried out on a limited, becoming more & more "fleshed out" as more of the facility is completed & able to come on line. Operations involve highly technical technology; electronics; power consumption; centralization; periphery/readsets; 3 dimensional planes; height; declination; computer constant of "umbrella" space dimensions; light like transparent, transient over lines & given lines - solid & broken; rotating;

Set 1/2 / Als "like" a system for tracking all kinds of space vehicles, etc. etc.
